ALTUS TECHNOLOGY SOLUTIONS

RELEVANT TECHNOLOGY PERFORMANCE

The Altus team is responsible for systems architecture, development, engineering and management activities for all existing and planned Department of Energy Office of Management (MA) IT systems and management processes. The team provides system and process engineering, and managerial resources for the support of mission applications that support MA functions including: FOIA, Information and Quality Assurance, facilities management, asset and property management, document, business administration, and customer relationship management.

In support of the US Census Bureau (USCB), Altus provides professional support services and necessary hardware and facilities to support the USCB disaster recovery planning and testing. Through this contract the USCB is provided access to disaster recovery facilities (Hot Site and Cold Site), computer systems, network resources and professional technical services to support disaster recovery test exercises and disaster recoveries.

Altus provides support services to the U.S. Nuclear Regulatory Commission for the Region I Telecommunication System. The Altus team is responsible for the 24/7 uninterrupted operation of the Avaya PBX, Voicemail, and VTC systems. Our services include system security, maintenance, upgrades, and audits. The Altus engineers and support team also provide supplemental technical support including: Unified Communication Manager functionality, Adds/Moves/Changes, and ISDN circuit support.

Altus provides Cyber Security and Boundary protection services for our customer that ensure confidentiality, integrity and credibility. Altus specializes in supporting the intelligence and defense communities by offering sophisticated technical and analytical expertise. Our services include Next Generation firewall, VPN, IDS, and IPS product implementation testing and support.

In support of the Centers for Disease Control, Infectious Diseases Pathology Branch (IDPB) Altus provides support for document, conformance, corrective and preventive action, training, equipment, and audit/assessment management to ensure compliance with the Clinical Laboratory Improvement Amendments (CLIA) and CDC's quality standards and policies for Infectious Diseases (ID) laboratories. Our Quality Assurance support team supports the implementation, execution, and continual improvement of IDPB's quality management processes.
