

Clearvoyant Consulting helps public sector leaders achieve uncompromising results based on our desire to be the best in the services we provide. By leveraging our experience with business re-engineering, system design, development, project management, and integration services, we deliver better, faster, and more enduring outcomes.

Clearvoyant Consulting's skill set and experience can include expert services in a wide range of IT and Business areas. Specifically, the company is focusing on areas that can be separated into the following areas of expertise:

Our Capabilities

Cloud Computing:

Clearvoyant works with our clients to make this transition to achieve faster innovation and economies of scale to lower operation costs and improve infrastructure efficiencies.

Data Analytics:

Clearvoyant leverages new technologies to reveal patterns, trends, and associations that allow our clients to make smarter and faster decisions. Application of data to cut through the chaos to enable better decision making. We are tool agnostic having achieved success using tools as simple as excel and as complex as custom coded R & python data science models. Our data scientists and visualization specialists help agencies harness the untapped power of their data to better understand their businesses and drive smarter decision-making.

Business Process Improvement:

We work with our clients to redesign business processes to achieve dramatic improvements in critical aspects like quality, output, cost, service, and speed. By visualizing these processes, we can decide what areas need to be altered or improved while aligning with current business structures. Then, we provide a set of prioritized opportunities that will most benefit your organization, address the root causes of problems and mitigate pain points. Finally, we design custom solutions for your business process improvement and roll up our sleeves to put the solutions into action.

Program Management:

Clearvoyant's project management approach includes organized planning techniques, integrated development with client, standard and agile methods to connect our clients' progressing mission, enablers required to sustain operations, and early risk identification with innovative prevention and mitigation strategies. Standardization of the methodology and tools have improved performance across multiple organizations.

Continuous Delivery/Continuous Integration:

The success of our client's transformation efforts hinges on understanding the source of problems and working toward addressing problematic areas. Our DevOps services provide useful techniques that address the root issues by building effective CI/CD processes from code check-in through deployment while leveraging industry best practices and techniques. We work with our clients to implement these development practices to reduce costs, deployment difficulties, and development risks. Using an agile methodology best practice, this enables Clearvoyant's software development teams to focus on meeting business requirements, code quality, and security because deployment steps are automated.

Web Content Management:

Clearvoyant's goal is to create a solution that meets the client's need of a modern digital platform by making website design and maintenance easy and secure. Regardless of the type or size of the client's website, a content management system is an excellent choice, and Clearvoyant will build a robust and highly customizable CMS-driven website based on your unique requirements.
