sole-source capability**

# Construction Services

**Alutiiq General Contractors, LLC (AGC)** is an expert in flatwork construction such as concrete, foundation pours, and paving, on horizontal construction projects, as well as major utilities and infrastructure (water, sewer, drainage, wastewater); finish work (fixtures, framing/drywall, case-goods, painting, etc.), mechanical, electrical, and plumbing installation on vertical construction projects, and overall program management services. AGC employees are strategically located in the U.S. Pacific Northwest. We have received paving awards for exceptional performance on runway work and received several sole source contracts due to the teams that have successfully performed work for the United States Army Corps of Engineers (USACE).

Evidence that **partnering with  
AGC** benefits our customers:

*"This General Contractor clearly has processes and methods to ensure projects run smoothly and on-schedule. I can easily recommend this contractor for future work."* - **Andrea Smothers, Base Contracting Officer, Army National Guard Bureau (2022)**

*"AGC worked diligently according to approved schedule and displayed tremendous flexibility and responsiveness throughout the performance period. This high visibility project, with unique requirements, was completed ahead of schedule and with high quality."* - **Angela Chaplinski, Supervisory Contract Administrator, MICC at the Joint Base Lewis McChord (2021)**

*"An overall very good company with proactive management that uses their technical knowledge, field experience, and common sense to achieve excellent results. Able to refine and adapt general concept and design to make a better end product for user and base. Additionally, they were extremely flexible with COVID-19 impacts and completed the project early with positive feedback from DPW, NCO Academy and USACE."* - **Andrew Park, Base Engineer, USACE Seattle District (2021)**

AGC can support 8(a) and small  
business set-asides, and we are  
open to developing teaming  
relationships.
